

Figure 19. This coyote was found dead 0.4 miles from the spot where it attacked a LP collared lamb and punctured the collar. Laboratory analyses confirmed that it was killed by the collar toxicant, Compound 1080.

Figure 20. Adult Angora goat flocks can be protected with LP collars by adding 5 to 10 collared kids per 100 uncollared adults. Two collared kids appear in this photograph (facing camera, left of center). Tests showed high coyote selection for the kids.
